

THE KIWI DIALECTIC

Student Activity Sheets

Te Pā Tūwatawata — Six Modules

Six reproducible handouts — one per module — for classroom use. Each sheet contains: the module's Māori motif and meaning, a key quote, reading questions, a concept map activity, and a writing or design exercise.

No.	Te reo Māori	English	Motif
1	Whakapapa o te raraunga	The whakapapa of data	Koru
2	Te Pā Tūwatawata hei tauira	Te Pā Tūwatawata as a model	Pā tūwatawata
3	AI me te raupatu matihiko	AI and digital extraction	Niho taniwha
4	Tikanga, ture, mana whakahaere	Tikanga, law, governance	Kōwhaiwhai
5	Hoahoa tika	Ethical design	Unaunahi
6	He anamata rangatira	Sovereign digital futures	Takarangi

Free to print and reproduce for educational use — kiwidialectic.com

MODULE 1 OF 6

Whakapapa o te raraunga

The whakapapa of data

Tohu — Koru — new life, growth, the origin of all things

The koru is the unfurling fern frond — new life emerging from its origin. Data, like the koru, has a whakapapa: it came from somewhere, from someone. This module asks you to trace it back.

"Data is not neutral. Every dataset carries the fingerprints of power — who collected it, why, and who it was taken from."

— The Kiwi Dialectic

Pātai — Reading questions

- 1. What does 'whakapapa' mean, and how does it apply to data?
- 2. Name one example of historical colonial data collection from Māori history.
- 3. What is the difference between 'owning' data and being the 'kaitiaki' of data?

Hanga mahere ariā — Concept map

Place Raraunga (Data) at the centre of the map below. Connect it to the concepts listed. Add your own connections and notes.

Origin	Collection agency	Purpose
Who benefits?	Who is harmed?	Whakapapa

Mahi — Activity

Choose a dataset you interact with daily (your social media feed, your school attendance system, a health app). Map its whakapapa:

- Where was it collected?
- By whom?
- For what purpose?
- Who holds it now?
- Who profits?
- Who could be harmed?

Write your answers below, then draw the whakapapa as a koru spiral — starting from the origin (the innermost point) and spiralling outward.

MODULE 2 OF 6

Te Pā Tūwatawata hei tauira

*Te Pā Tūwatawata as a model***Tohu — Pā tūwatawata — the palisaded village, concentric circles of collective protection**

A pā is not a wall to keep the world out — it is a structure that makes collective life possible on our own terms. The concentric circles represent whānau at the centre, hapū in the next ring, iwi in the next, and the wider world at the outer edge. Sovereignty radiates outward from the centre.

"The question is not whether Māori data will be used — it will be. The question is who governs how it is used, and in whose interest."

— The Kiwi Dialectic

Pātai — Reading questions

- 1. What is Te Pā Tūwatawata, and what does its name mean?
- 2. What are the four CARE Principles? How do they differ from the FAIR principles?
- 3. What does 'tikanga-based access control' mean in a digital context?

Hanga mahere ariā — Concept map

Place Mana Whakahaere at the centre of the map below. Connect it to the concepts listed. Add your own connections and notes.

Iwi governance	CARE Principles	Tikanga protocols
Infrastructure ownership	Economic control	Cultural safety

Mahi — Activity

Design a 'digital pā' for a community you belong to.

Draw three concentric circles on the space below. Label them:

- Inner circle: most protected data (tapu)
- Middle circle: community data (accessible to members)
- Outer circle: publicly accessible data

For each circle, write: Who governs this? Who can access this? What tikanga applies? Then: draw the palisade (tūwatawata). What does it protect? What does it let in?

MODULE 3 OF 6

AI me te raupatu matihiko

AI and digital extraction

Tohu — Niho taniwha — the taniwha's teeth, protection at the boundary

The taniwha is not a monster but a guardian. The niho taniwha pattern — rows of triangular teeth — marks the threshold between what is protected and what is exposed. This module asks: who has the right to cross the threshold of Māori data?

"The model is trained on your words, your stories, your knowledge. The profit goes to Silicon Valley. This is colonialism with better graphics."

— The Kiwi Dialectic

Pātai — Reading questions

- 1. What is a large language model, and how is it trained?
- 2. What is the 'public data' justification used by AI companies? Why is it inadequate?
- 3. How does AI data extraction parallel 19th-century colonial land extraction?

Hanga mahere ariā — Concept map

Place Raupatu Matihiko at the centre of the map below. Connect it to the concepts listed. Add your own connections and notes.

Training data	Consent?	Corporate profit
Māori knowledge	Historical parallel	Tapu knowledge

Mahi — Activity

You are a data sovereignty lawyer representing an iwi. A major AI company has used publicly accessible recordings of kaumātua speaking te reo Māori to train a commercial language model — without iwi consent.

Write a 200-word statement to the AI company explaining:

1. Why this is raupatu matihiko
2. What the company must do now
3. What precedent this should set for all AI training on Indigenous data

MODULE 4 OF 6

Tikanga, ture, mana whakahaere

Tikanga, law, and governance

Tohu — Kōwhaiwhai — rafter patterns that encode the genealogy of law

Kōwhaiwhai patterns on the tahuhu (ridgepole) of a wharenui represent the whakapapa of the people below — their ancestors, their law, their obligations. Tikanga is the kōwhaiwhai of governance: it encodes the ancestral logic that determines what is permitted and what is not.

"You cannot decolonise data governance by adding a Māori seat at a table designed by someone else."

— The Kiwi Dialectic

Pātai — Reading questions

- 1. What are the four tikanga principles most relevant to data governance (mana, tapu, utu, kaitiakitanga)?
- 2. What does the New Zealand Privacy Act 2020 fail to protect?
- 3. What is UNDRIP, and what does it say about Indigenous data rights?

Hanga mahere ariā — Concept map

Place Tikanga & Data at the centre of the map below. Connect it to the concepts listed. Add your own connections and notes.

Mana	Tapu	Utu
Kaitiakitanga	UNDRIP	Privacy Act 2020

Mahi — Activity

A university researcher wants to use health data from a Māori community for a study on diabetes prevention. The data was collected by the community's own health service over 10 years.

Design a tikanga-based consent and governance protocol for this research. Your protocol must address:

- Who must give consent (individual? whānau? iwi?)
- What conditions apply to how the data is used
- Who owns the research results
- What happens to the data at the end of the study
- What the researcher owes the community in return (utu)

MODULE 5 OF 6

Hoahoa tika

*Designing ethical AI systems***Tohu — Unaunahi — fish scales, each layer interlocking with the next**

Unaunahi — fish scales — represent abundance and connection to the moana. Each scale interlocks with the ones around it. No part works alone. Ethical design is like unaunahi: every layer of a system carries responsibility for the whole. Remove one scale, and the system is exposed.

"Decolonising AI does not mean removing technology from Māori communities. It means ensuring technology serves those communities rather than extracting from them."

— The Kiwi Dialectic

Pātai — Reading questions

- 1. What are the five design principles for Māori-centred AI described in Module 5?
- 2. What is 'ethics washing'? Give a real-world example.
- 3. What does 'benefit-sharing by design' mean in practice?

Hanga mahere ariā — Concept map

Place Hoahoa Tika at the centre of the map below. Connect it to the concepts listed. Add your own connections and notes.

Consent architecture	Tapu-aware access	Benefit- sharing
Community accountability	Te reo as first-class	Ethics washing

Mahi — Activity

Rate a real AI product using the Hoahoa Tika framework. Choose one: Google Translate (te reo Māori), Siri/Alexa, a health AI, or a school attendance system.

For each principle below, score the product 1–5 and explain why:

Principle	Score (1–5)	Evidence / reason
Consent architecture		
Tapu-aware access controls		
Benefit-sharing by design		
Community accountability		

Te reo Māori as first-class		
-----------------------------	--	--

MODULE 6 OF 6

He anamata rangatira

*Sovereign digital futures***Tohu — Takarangi — the double spiral, past and future inseparable**

The takarangi is two spirals turning together. One is the past: the ancestors, the land, the knowledge that has always been here. The other is the future: the anamata rangatira we are building now. They share the same centre. Sovereignty is not a destination — it is a continuous turning.

"We do not plan for the next election. We plan for the next seven generations."

— The Kiwi Dialectic

Pātai — Reading questions

- 1. What does 'digital sovereignty' mean for Māori communities?
- 2. How did Te Hiku Media demonstrate that community-owned AI is possible?
- 3. What is 'intergenerational accountability' and why does it matter for digital infrastructure?

Hanga mahere ariā — Concept map

Place Anamata Rangatira at the centre of the map below. Connect it to the concepts listed. Add your own connections and notes.

Infrastructure ownership	Governance authority	Economic control
Cultural integrity	Te Hiku Media	Seven generations

Mahi — Activity

Capstone exercise: Write your manifesto for Māori digital sovereignty.

Your manifesto must:

- Name at least three things that must change
- Ground at least two claims in concepts from this course (whakapapa, tikanga, kaitiakitanga, raupatu, hoahoa tika, etc.)
- End with a demand — not a request
- Be written in a voice that reflects tino rangatiratanga: not asking permission, but asserting a right

Aim for 200–300 words. Read it aloud.
